BridgeCo-based DMP designs

The BridgeCo DMP platform DM830/DM850 is designed to provide consumer access to online and computer archived audio content, including content protected by digital rights management (DRM) encryption. Whether streaming audio or archived files—subscription music services or purchased content—BridgeCo provides a single product platform that is compatible with a wide variety of content sources, file formats, DRM and payment models.

StreamUnlimited is a development house with a Philips history. Our team provides a vast audio/ video development background combined with industrial experience. StreamUnlimited already develops consumer electronic devices like DMP's since 2001.

StreamUnlimited is currently cooperating with BridgeCo on their fourth project and are an official BridgeCo development partner. The projects range from UPnP technology over streaming internet radio stations for the home entertainment area, to interface extensions for the functionality of the iPod.

What we offer:

- Software Development
 - Adaptation of decoders (audio, video)
 - Individual application design
 - Creation of user interfaces
 - Development of individual drivers
 - Implementation of streaming network protocols
 - (RTSP, RTP, mDNS)
- Hardware Electronics
 - Industry ready PCB's
 - Other Audio/ Video modules
 - (CD, Hard disc, etc.)
- Hardware Mechanics
 - Mechanical development
 - Additional features on demand
 - Tool management
- Industrial
 - Selection of suppliers
 - Production ramp-up (in Asia)
 - Bill of material management
