

## Chromecast built-in™ Multi-room Certification

### Chromecast built-in

Integrating Chromecast built-in for audio into a product requires the following certifications (among others):

- *Multi-room certification* at SoundCertificate
- *Self certification* for general playback features

Self-certification (like manual and automated CRT) may be outsourced to SoundCertificate as well. We also offer pre-testing for products with Google Voice Assistant, covering ART, general debugging and more.

#### Multi-room certification at SoundCertificate

1. You apply for a test run ahead of time.
2. A test run is scheduled.
3. You provide product samples to us on time.
4. We provide feedback within one week.
5. If issues are found during a certification test run, a re-test needs to be scheduled.

#### About Chromecast built-in

*Chromecast built-in for audio* is a technology that lets users stream their favorite music from their phones, tablets or computers right to their speakers. Many widely used content apps support Chromecast, allowing for easy streaming to speakers that embed this technology. Furthermore, Chromecast-enabled devices can effortlessly be grouped to form a multi-room setup. These devices and multi-room groups may also be controlled via the Google Assistant.
