

# StreamThings

StreamThings is a modular IoT protocol that not only enables device control by various voice assistant ecosystems, it also enables the device to connect and control the modern smart integration environment. In this segment, interoperability is essential, and StreamThings offers a market leading solution to connect the device with all of the industry standard systems.

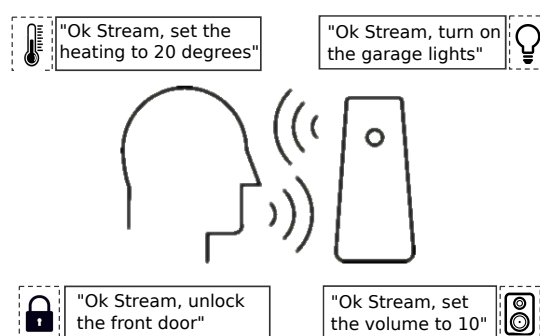

## Advantages:

- Plugin architecture enables the simple addition of any other ecosystem
- Extendable via the StreamThings local rule engine to meet individual product development requirements
- Cost effective and optimised time-to-market, with OTA update availability

## Edge Voice Assistant:

A local Edge Voice assistant which enables full product control and smart integration with or without cloud connection. StreamUnlimited can provide a custom edge voice assistant on its own, or part of a multi voice product in combination with cloud based solutions. The Wake word can be fully customized.

## Smart Integration Use Cases:

- Residential; integrate an audio device into a smart home environment and use it to control lights, music playback and pre-configured scenes
- Healthcare; improve safety and communication with smart device integration and an edge voice assistant.
- Industrial; control production line equipment by integrating local, customised voice assistant functionality

**StreamUnlimited**, founded in 2005, originated as a team of 25 engineers and in 13 years has built its own IP while more than quadrupling its size. StreamUnlimited is now a supplier of software solutions and modules for connected audio and IOT products, with office locations in Vienna, Bratislava, Iasi, Shenzhen and Santa Clara, CA. Partnering with all major semiconductor companies and technology providers in the consumer electronics channel, StreamUnlimited works with a global cross-section of high-end audio, CEDIA-channel, premium and mainstream consumer electronics manufacturers.
